

# IN THE CLAIMS

1 1. (Previously Presented) A stroller with a basket, comprising:  
 2 a frame assembly having a bottom end and a first block ;  
 3 a plurality of wheels pivotally connected to the bottom end of the frame assembly ;  
 4 a backrest connected to the frame assembly ;  
 5 a seat connected to the frame assembly and located under the backrest ; and  
 6 a basket connected to the frame assembly and located under the seat, the basket having  
 7 a basket body and a basket frame which is adjoined to the basket body and pivotally connected  
 8 to the frame assembly ;  
 9 whereby, the basket can be adjusted in height by means of altering the position of the  
 10 basket frame relative to the first block, and wherein the basket frame is telescopic and further  
 11 has a second block, so that when the basket frame is in a retractive position, the second block  
 12 touches with the first block, while when the basket frame is in a stretchy position, the second  
 13 block separates from the first block.

1 2. (Previously Presented) The stroller with the basket as claimed in claim 1, wherein  
 2 the frame body respectively has the first block at both sides for supporting the basket frame.

1 3. (Original) The stroller with the basket as claimed in claim 1, wherein the basket  
 2 frame is flexible so as to change the position thereof relative to the first block.

1 4. (Previously Presented) The stroller with the basket as claimed in claim 2, wherein  
 2 the first block respectively has an inclined side surface adjacent to the seat and the wheels, and

3 the inclination of the former is smaller so as to enable the first block to securely support the  
4 basket frame and stretch the basket body.

1 5. (Cancelled)

1 6. (Previously Presented) The stroller with the basket as claimed in claim 1, wherein  
2 the basket frame has an inner rod having a slot, an outer rod telescopically coupled with the  
3 inner rod, and an elastic element accommodated in the inner rod; and a fastener penetrates the  
4 second block, the outer rod, and the slot and at the same time restricts the elastic element at an  
5 end of the inner rod.

1 7. (Currently Amended) The stroller with the basket as claimed in claim 1, wherein the  
2 first block has a block body and an ear, having a curved surface abutting to the frame assembly  
3 to prevent the [~~second~~] first block from moving.

1 8. (Previously Presented) The stroller with the basket as claimed in claim 7, wherein  
2 the block body has a first side and a second side with different inclinations so as to securely  
3 support the basket frame and adjust the basket frame in height.

1 9. (Previously Presented) The stroller with the basket as claimed in claim 1, wherein  
2 the frame assembly respectively has the first block at both sides and also the basket frame  
3 correspondingly has two second blocks.

10. (Previously Presented) The stroller with the basket as claimed in claim 1, wherein  
the first block has a first side and a second side with different inclinations.
